

SAI SOCIAL RESPONSIBILITY RESEARCH CENTRE

WORLD ENVIRONMENT DAY

SSRRC Organizes Interactive Environmental Awareness Workshop in Slum Area on World Environment Day

Date: 05/06/2026

Venue: Safdarjung Flyover Slum Area, New Delhi

Organized by: Sai Social Responsibility Research Centre (SSRRC)

The program commenced with an inspiring introductory session referencing the creative artwork and awards achieved by participants under the theme of a "Greener Earth," emphasizing that protecting the planet begins with personal daily choices. An interactive icebreaker activity titled "*Earth's Protectors*" was conducted, where all participants stood up and pledged to eliminate harmful practices like throwing garbage on streets or leaving water taps running. Those demonstrating responsible habits were applauded and honored as guardians of the Earth.

Experienced mentors and volunteers conducted an engaging session focused on **3 Daily Habits to Save the Earth:**

1. **Waste Segregation (Kachra Alag Karo):** Instructors demonstrated the three-bucket waste segregation system using practical examples. An interactive sorting game was conducted where children received chits representing different waste items (such as

banana peels, candy wrappers, and broken slippers) and placed them into the correct buckets, earning enthusiastic applause for correct sorting.

- **Green Bucket (Organic Waste):** Food scraps and vegetable peels to be used for cattle fodder and organic compost.
 - **Blue Bucket (Recyclable Waste):** Paper, plastic bottles, and dry materials to be collected and sold for recycling.
 - **Red Bucket (Hazardous Waste):** Blades, medical waste, and sharp objects requiring careful handling and adult supervision.
2. **Water Conservation (Paani Bachao):** Mentors demonstrated the stark contrast between using a single bucket of water versus running a open tap continuously. Participants calculated the significant volume of water wasted daily during routine tasks like brushing teeth or bathing. All children solemnly pledged to turn off running taps while brushing and use buckets for bathing to prevent water wastage.
3. **Plantation & Care:** Highlighting the vital role of plants in purifying Delhi's air. Each child was provided with a plant sapling, adopting it as their personal responsibility to water and nurture daily as it grows.

Following the practical modules, an engaging story session was held describing a village that overcame severe flooding and environmental degradation through collective waste management and tree plantation. This led to a meaningful discussion on human responsibility towards nature, inspiring children to see themselves as "doctors curing an ailing Earth."

Additionally, beautiful environmental-themed *Rangoli* artwork was created at the venue by the participants, adding vibrant color and artistic enthusiasm to the environmental campaign.
